Securasite 48 inch Lockbox 11

Product code SE100002 | Heavy-duty tool and equipment storage

Product description

A heavy-duty steel jobsite storage box for use on construction sites, in vans, in workshops and in maintenance areas, designed to keep tools, equipment and everyday trade supplies secure. Its lockable design helps deter theft and restrict unauthorised access, keeping valuable equipment together between tasks and when the site is unattended. The heavy-duty 1.4 mm steel body has a powder-coated finish for extra durability in tough environments.

The top-opening lid is supported by gas struts for assisted access. Side handles help with positioning, while four raised feet support the box above floor level and provide access for forklift handling. A padlock-compatible clasp and improved lock bar provide the locking arrangement; padlocks are not included.

Key features

• 1.4 mm steel main body for robust everyday storage.

• Powder-coated finish for extra durability in tough environments.

• Gas-assisted lid opening for easier access to stored equipment.

• Padlock-compatible clasp with improved lock bar.

• Side handles for positioning and four raised support feet.

• Forkliftable base for convenient movement around site.

SE100002 technical specifications

Specification	Details
Product name	Securasite 48 inch Lockbox 11
CMT product code	SE100002
Nominal size	48 inch
External dimensions	1219 x 610 x 701 mm (W x D x H)
Main body material	Steel
Main body thickness	1.4 mm
Finish	Industrial powder coating
Colour	Yellow
Lid support	Gas struts
Locking arrangement	Padlock-compatible clasp; improved lock bar
Padlock supplied	No
Handles	Side handles
Base	Four support feet
Forklift handling	Yes

Applications

Construction and civil engineering sites; refurbishment and fit-out projects; electrical, plumbing and mechanical trades; vans, workshops, depots and facilities maintenance. Suitable for organising hand tools, portable equipment, accessories and non-hazardous consumables between tasks.

Use and care

Position on a firm, level surface. Keep the lid opening clear and close and lock the box when unattended. Inspect the handles, feet, hinges, locking components and gas struts regularly. Remove dirt with a damp cloth and dry afterwards. Close and secure the lid before moving the box. Use suitable forklift equipment and keep the load balanced during handling.
